

BIOLOGICAL FERTILISER

Container Care & Product Storage

Save on product packaging costs by using SONIC Natural Farming **Reuse and Refill Program**. Here are some tips for giving your product a healthy shelf-life and for keeping containers in a good reusable condition.

CLEANING

- Clean product containers immediately after emptying, and dry (upside down) where possible.
- For difficult stains use high pressure hose or wash with a scrubber and household detergent. Rinse thoroughly with water.
- For stains and buildup, use household detergent or eucalyptus wool wash, and a scrubber. Rinse thoroughly with water and leave to dry.

STORAGE

- Store Biological Fertiliser containers in a cool, shady place with lids on. The lids supplied with SONIC Natural Farming containers are 'breathable' lids with an outlet valve. However, sometimes ongoing activity within the product may cause container expansion, in this case loosen the lid slightly to release the air.
- We recommend using Biological Products within 3-6 months to get the maximum benefits.
- Store away from direct sunlight as plastic is NOT always UV stabilised.

NOTE: NEVER STORE BIOLOGICAL PRODUCTS IN DILUTED FORM
