

## BIOLOGICAL FERTILISER & LIVESTOCK SUPPLEMENTS USE, CONTAINER CARE & STORAGE

**SONIC Natural Farming Biological Products** are Liquid Concentrates requiring dilution. In general, use low rates for seeding and early plant growth, with increasing rates during the plant growth cycle. Here are some tips to get the most out of your Biological Soil Care Products.

### USE

White yeasts may form on the surface of the liquid and sediments may appear at the container bottom, both of these are normal. Fill watering can or container with water before adding product to reduce foam buildup. Use within 48 hours of dilution. Do not store in diluted form.

**Seed Treatment:** Use when direct seeding, as a seed treatment (inoculant), and as a pre-soak prior to transplanting seedlings, to minimise transplant shock.

**Foliar and Soil Drench:** Apply periodically as a foliar spray and soil drench, throughout the plant's growth cycle.

### OPTIMAL APPLICATION TIMES

When applying Biological Fertiliser, the best conditions are under cloud, early in the day, when it is raining, or in the evening to harness the night ground moisture.

### GENERAL RATE

30-100ml per average 9L watering can, or dilute 3-10L:100L water. Use between 2-20L/ha depending on application. See website for suggested application rates.

### CLEANUP

- Shaking the product during use can minimise buildup on internal container edges. Clean product containers immediately after emptying, and dry (upside down) where possible.
- For difficult stains use high pressure hose or wash with a brush and a small amount of household detergent. Rinse thoroughly with water.
- For stains and buildup, use household detergent or eucalyptus wool wash, and a scrubber/brush. Rinse thoroughly with water and leave upside down to dry.

### STORAGE

- Store Biological Fertiliser containers in a cool, shady place with lids on. SONIC 10L and 20L containers are supplied with 'breathable' lids with an outlet valve. Ongoing activity within this product may cause container expansion, in this case, loosen the lid slightly during storage.
- Use Biological Products within 3-6 months to get the maximum benefits.
- Store away from direct sunlight as plastic is NOT always UV stabilised.
